React Movie Search

1. Problem Description:

The goal of this project is to develop a movie wishlist application that allows users to search for movies, view movie details, and manage their favourites list. The application should provide a user-friendly interface and seamless interaction for movie enthusiasts to explore and track their favourite movies.

2. Modules Details and Key Features:

a. Movie Search Module:

- Allows users to search for movies by title.
- Utilizes the OMDB API to fetch movie data based on user queries.
- Provides real-time search suggestions for enhanced user experience.

b. Movie List Module:

- Displays a list of search results or favorite movies.
- Each movie item includes essential details such as title, poster image, and release year.
- Users can interact with movie items to view more details or add/remove them from favorites.

c. Movie Details Module:

- Shows comprehensive details of a selected movie, including plot summary, ratings, genre, and cast.
- Allows users to navigate back to the movie list or add/remove the movie from favorites.

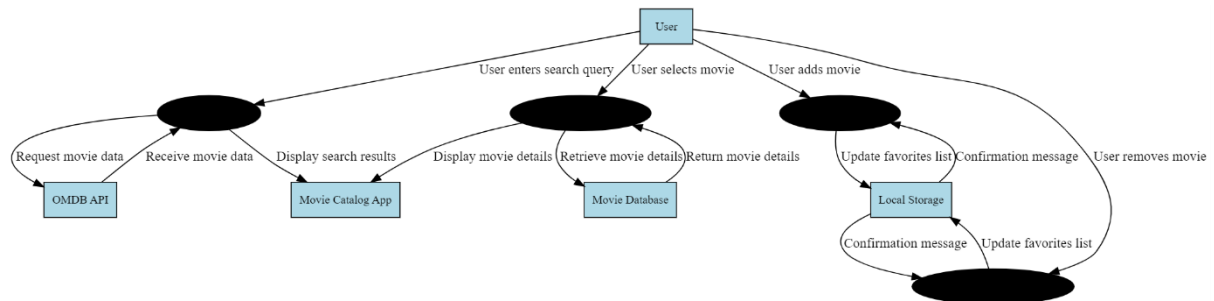

d. Favorites Management Module:

- Enables users to add movies to their favorites list for quick access.
- Provides options to remove movies from the favorites list.

e. User Interface (UI) Enhancements:

- Responsive design for optimal viewing experience across devices.
- Intuitive navigation and clear visual hierarchy for easy exploration.
- Interactive elements with hover effects and click animations for engaging user interaction.

3. Design Layout:

4. User Interface (UI) Design:

5. Appendix:

Code:-

App.js

```
import React, { useState, useEffect } from "react";
import "bootstrap/dist/css/bootstrap.min.css";
import "./App.css";
import MovieList from "./components/MovieList";
import MovieListHeading from "./components/MovieListHeading";
import SearchBox from "./components/SearchBox";
import AddFavourites from "./components/AddFavourites";
import RemoveFavourites from "./components/RemoveFavourites";

const App = () => {
  const [movies, setMovies] = useState([]);
  const [favourites, setFavourites] = useState([]);
  const [searchValue, setSearchValue] = useState("");

  const getMovieRequest = async (searchValue) => {
    const url = `http://www.omdbapi.com/?s=${searchValue}&apikey=263d22d8`;

    const response = await fetch(url);
    const responseJson = await response.json();

    if (responseJson.Search) {
```

```

        setMovies(responseJson.Search);
    }
};

useEffect(() => {
    getMovieRequest(searchValue);
}, [searchValue]);

useEffect(() => {
    const movieFavourites = JSON.parse(
        localStorage.getItem("react-movie-app-favourites")
    );

    if (movieFavourites) {
        setFavourites(movieFavourites);
    }
}, []);

const saveToLocalStorage = (items) => {
    localStorage.setItem("react-movie-app-favourites", JSON.stringify(items));
};
