

BCSE203E- Web Programming

Assessment 6

Task 1

Portfolios are proof of your abilities and the unique way to showcase your work and let others know about yourself. Also, it serves as a platform to display your work and demonstrate your skills. In this assignment, you will use HTML and CSS to create a website portfolio. It contains different sections like “Introduction to Yourself, About You, Services, Contact Details, and Your Portfolio”.

Step 1: Create an HTML Website Template

Make the following changes to your *index.html* default web page. This will be your website's Home page.

- Title*. Give the document a title (title appears in browser tab, not on web page).
- Background*. Change the background color of the web page (you choose the color).
- Banner*. Add the banner image (optional).
- Headline*. Add a headline (e.g. Welcome to my Page!) using a heading tag.
- Use Semantics* HTML tags to create a layout a website (header, menu, body, content, aside and footer)
- Paragraph*. Write one or more paragraphs describing the website.

Step 2: Navigation Buttons

Now that you have created all web pages that will make up your website, go back to make the hyperlinks to their respective web pages. It should contain the following

- Internal linking
- External linking
- Images as link
- Email as link

Step 3: About Me.

This page will contain information about you. Add the following to this page:

- A paragraph describing yourself.
- Add a background image instead of a color.
- At least two pictures of you. One of which should be yourname.jpg (CSS floating image).

- d) At least two pictures of things from your life (i.e. hobbies, interests, etc.). These should be incorporated into the web page nicely (CSS floating image).
- e) Save this page as about.html

Step 4 Contact Me

- a) Add your professional contact details such as Email, GitHub profile, LinkedIn, YouTube, etc.
- b) Your personal contacts optional.

Step 5: Include web pages as of your choice

Step 6: Apply CSS properties to your web pages

Step 7: Host your personalized website using GIT

Submission Guidelines

a) GitHub repository

Upload all your web resources in your GitHub repository and organize your folder.

b) Document Report

Prepare a documentation report of HTML and CSS tags with corresponding screenshots and your file should be name as “register_no_A6.1”

Example: 22BCE001_A6.1

Note: Include your GitHub link in the report
